PREFACE

I/ We have developed this software for **<Project Name>** using Visual Basic as front end and MS-Access database as back-end. This application is designed to automate the operations of a departmental store.

Through this project, I/ we have tried to automate the **<Project Name>**. It has been done to reduce the manual and mental tedious work. The energy and resources saved using this program can be utilized for the other critical areas of the departmental store.

This project will be very useful to maintain records of a **<Project Name>**. As they have to feed the data related to the particular **<table Name>**, **<table Name>**, **<table Name>** and **<table Name>** into their corresponding tables. The software will do the calculation part, the checking part etc, that might have been typical if it is done manually.

[Note: This is just a sample. It will be as per your case study.]

Table of Contents

S.No.	Topic	Page No.
1.	Case Study	
2.	Introduction	
2.1	Back-end	
2.2	Front End	
2.3	Working Environment	
3.	ER Diagrams	
4.	Database	
4.1	Database Schema	
4.2	Relationship Diagram	
5.	Other Files Used	
6.	Program Description & Source Code	
7.	Output and Reports	
8.	Scope for Further Development	
9.	Bibliography
